Staff Educator's Guide to Clinical Orientation, 2E guides readers in creating and sustaining a high-quality orientation and onboarding program that meets the needs of nurses, organizations, and patients. In this fully revised second edition, authors Alvin Jeffery, Robin Jarvis, and Amy Word-Allen provide all the tools staff educator's need to successfully develop a nursing and healthcare workforce. Whether the staff educator is new to leading orientation efforts or a seasoned nursing staff development specialist, this book will help readers: · Understand and use the ADDIE model · Analyze, design, and implement an orientation program · Evaluate an individual's competency · Conduct surveys and focus groups · Manage orientee errors and personality conflicts

This video series looks at many legal and ethical issues which nurses are like to encounter.

Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up-to-date clinical information. An extensive knowledge of basic pathophysiology, as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago, new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines, a comprehensive multidisciplinary approach presenting the information is essential, similar to the multidisciplinary approach that

is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses, we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome, an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU, and nursing care of the ICU patient.

Medical acronyms and abbreviations offer convenience, but those countless shortcuts can often be confusing. Now a part of the popular Dorland's suite of products, this reference features thousands of terms from across various medical specialties. Its alphabetical arrangement makes for quick reference, and expanded coverage of symbols ensures they are easier to find. Effective communication plays an important role in all medical settings, so turn to this trusted volume for nearly any medical abbreviation you might encounter. Symbols section makes it easier to locate unusual or seldom-used symbols. Convenient alphabetical format allows you to find the entry you need more intuitively. More than 90,000 entries and definitions. Many new and updated entries including terminology in expanding specialties, such as Nursing; Physical, Occupational, and Speech Therapies; Transcription and Coding; Computer and Technical Fields. New section on abbreviations to avoid, including Joint Commission abbreviations that are not to be used. Incorporates updates suggested by the Institute for Safe Medication Practices (ISMP).

Moses Wilhelm Shapira's infamous Deuteronomy fragments - long believed to be forgeries - are authentic ancient manuscripts, and they are of far greater significance than ever imagined. The literary work that these manuscripts preserve - which Idan Dershowitz calls "The Valediction of Moses" or "V" - is not based on the book of Deuteronomy. On the contrary, V is a much earlier version of Deuteronomy. In other words, V is a proto-biblical book, the likes of which has never before been seen. This conclusion is supported by a series of philological analyses, as well as previously unknown archival documents, which undermine the consensus on these manuscripts. An excursus co-authored with Na'ama Pat-El assesses V's linguistic profile, finding it to be consistent with Iron Age epigraphic Hebrew. V contains early versions of passages whose biblical counterparts reflect substantial post-Priestly updating. Moreover, unlike the canonical narratives of Deuteronomy, this ancient work shows no signs of influence from the Deuteronomic law code. Indeed, V preserves an earlier, and dramatically different, literary structure for the entire work - one that lacks the Deuteronomic law code altogether. These findings have significant consequences for the composition history of the Bible, historical linguistics, the history of religion, paleography, archaeology, and more. The volume includes a full critical edition and English translation of V.

Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide. Simulation and skills centres have become established to integrate simulation into mainstream education in all medical, nursing, and paramedical fields. Borrowing from the experience and methodologies of industries that are using simulation, medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula. This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation. Simulation has been used to enhance the educational experience in a diverse range of fields; therefore a wide variety of disciplines are represented. The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing and course development, and promotion. Section two deals with simulators and related training devices that are required to equip a stand-alone or institution-based centre. The features, strengths, and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements. There is a guide to producing scenarios and medical props that can enhance the training experience. The third section covers adult education and it reviews the steps required to develop courses that comply with 'best practice' in medical education. Teaching skills, facilitating problem-based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education. The manual concludes with guides for the major specialties that use simulation, including military, paediatrics, CPR and medical response teams, obstetrics, and anaesthesia.
