The EU's chemicals strategy for sustainability towards a toxic-free environment. Chemicals are essential for the well-being, high living standards and comfort of modern society. They are used in many sectors, including health, energy, mobility and housing. However, most chemicals have hazardous properties which can harm the environment and human health.

Chemicals strategy - Environment

The instability in this region has direct consequences for the security of the European Union's neighbours and for the EU itself. In 2011, to respond to the multiple factors of this instability, the EU adopted the Sahel security and development strategy: the first comprehensive approach aimed at ensuring various external policy programmes and instruments converge towards common objectives.

Making the EU a role model for a society empowered by data. The European data strategy aims to make the EU a leader in a data-driven society. Creating a single market for data will allow it to flow freely within the EU and across sectors for the benefit of businesses, researchers and public administrations. People, businesses and organisations should be empowered to make better decisions based on insights from non-personal data, which should be available to all.
