BSL Transport Phenomena 2e Revised: Chapter 3 - Problem 3B.9 Page 1 of 11. Problem 3B.9. Slow transverse flow around a cylinder (see Fig. 3.7-1). An incompressible Newtonian fluid approaches a stationary cylinder with a uniform, steady velocity v_1 in the positive x direction. When the equations of change are solved for creeping flow, the following expressions are found for the pressure and velocity in the immediate vicinity of the cylinder (they are not valid at large distances): $p(r, \theta) = p_\infty - \frac{3}{2} \mu v_1 \frac{a^2}{r^3} (2 \cos^3 \theta - \cos \theta)$.
