The environment is perhaps most misunderstood as a static place, somewhere "out there," separated from the practices of our everyday lives. Given this assumption, environmental movements and concerns have remained mostly marginalized or denigrated in cultural studies publications, conferences, and presentations.

Cultural Studies and Environment, Revisited: Amazon.co.uk ...

Cultural environmentalism is the movement that seeks to protect the public domain. The term was coined by James Boyle, professor at Duke University and contributor to the Financial Times. The term stems from Boyle's argument that those who seek to protect the public domain are working towards a similar ends as environmentalists.

Cultural environmentalism - Wikipedia

In this thoughtful and highly readable book, Noel Sturgeon illustrates the myriad and insidious ways in which American popular culture depicts social inequities as "natural" and how our images of "nature" interfere with creating solutions to environmental problems that are just and fair for all.

Cultural Studies and Environment – Phaedra C. Pezzullo, PhD

As environmental issues increasingly impinge on society, sociologists have turned their attention to nature and the environment. However, unlike the majority of sociological work on environmental issues, which has too often been dominated by abstract theoretical disputes, this book concentrates on empirical studies in environmental sociology.

Cultures of Environmentalism - Empirical Studies in ...

At least in earlier manifestations, environmentalism was often seen as a totalizing discourse, one which threatened to elide social or cultural differences based on race, sex and gender.

What is environmental cultural studies

Cultural Studies and Environmentalism: The Confluence of Ecojustice, Place-Based (Science) Education, and Indigenous Knowledge Systems Cultural Studies and Environmentalism: The Confluence of Ecojustice, Place-Based (Science) Education, and Indigenous Knowledge Systems by Deborah J. Tippins, Michael P. Mueller, Michiel van Eijck, Jennifer D. Adams

Cultural Studies and Environmentalism starts from the premise that schooling is a small part of the larger educational domain in which we live and learn. Informed by this overarching notion, the book opens up ways in which home-grown talents, narratives, and knowledge can be developed, and eco-region awareness and global relationships can be facilitated. Incorporating a diversity of perspectives that include photography, poetry and visual art, the work provides a nuanced lens for evaluating educational problems and community conditions while protecting and conserving the most threatened and vulnerable narratives. Editors and contributors share the view that the impending loss of these narratives should be discussed much more widely than is currently the case, and that both teachers and children can take on some of the responsibility for their preservation. The relevance of ecojustice to this process is clear. Ecojustice philosophy is a way of learning about how we frame, or perceive, the world around us—and why that matters. Although it is not synonymous with social or environmental justice, the priorities of ecojustice span the globe in the same way. It incorporates a deep recognition of the appropriateness and significance of learning from place-based experiences and indigenous knowledge systems rather than depending on some urgent “ ecological crises ” to advocate for school and societal change. With a multiplicity of diverse voices coming together to explore its key themes, this book is an important starting point for educators in many arenas. It brings into better focus a vital role for the Earth ’ s ecosystems in the context of ecosociocultural theory and participatory democracy alike. “ Encompassing theoretical, empirical, and experiential standpoints concerning place-based knowledge systems, this unique book argues for a transformation of (science) education ’ s intellectual tradition of thinking that emphasizes individual cognition. In its place, the book offers a wisdom tradition of thinking, living, and being that emphasizes community survival in harmony within itself and with Mother Earth. ” Glen Aikenhead

The environment is perhaps most misunderstood as a static place, somewhere "out there," separated from the practices of our everyday lives. Given this assumption, environmental movements and concerns have remained mostly marginalized or denigrated in cultural studies publications, conferences, and presentations. Recent global developments have made changing this oversight and, at times, direct resistance to engaging environmental concerns a new priority. This edited collection illustrates an appreciation of the dynamic, palpable, and significant ways the environment permeates culture (and vice versa), as well as a collective commitment to the ways that cultural studies has more to offer—and to learn from—taking environmental matters to heart. Like foundational categories of identity, economics, and historical context, this collection reminds us why the environment is and should be considered relevant to any work done in the name of "cultural studies." Including research from four continents and across media, the authors offer insights on timely topics such as food, tourism, human/animal relations, forests, queer theory, indigenous rights, and water. This book was published as a special issue of Cultural Studies.

The last decade has seen a dramatic increase in the attention paid by social scientists to environmental issues, and a gradual acknowledgement, in the wider community, of the role of social science in the public debate on sustainability. At the same time, the concept of `culture', once the property of anthropologists has gained wide currency among social scientist. These trends have taken place against a growing perception, among specialist and public, of the global nature of contemporary issues. This book shows how an understanding of culture can throw light on the way environmental issues are perceived and interpreted, both by local communities and within the contemporary global arena. Taking an anthropological approach the book examines the relationship between human culture and human ecology, and considers how a cultural approach to the study of environmental issues differs from other established approaches in social science. This book adds significantly to our understanding of environmentalism as a contemporary phenomenon, by demonstrating the distinctive contribution of social and cultural anthropology to the environmental debate. It will be of particular interest to students and researchers in the fields of social science and the environment.

Ecocriticism is one of the most vibrant fields of cultural study today, and environmental issues are controversial and topical. This volume captures the excitement of green reading, reflects on its relationship to the modern academy, and provides practical guidance for dealing with global scale, interdisciplinarity, apathy and scepticism.

As environmental issues increasingly impinge on society, sociologists have turned their attention to nature and the environment. However, unlike the majority of sociological work on environmental issues, which has too often been dominated by abstract theoretical disputes, this book concentrates on empirical studies in environmental sociology. It shows what sociologists can bring to current debates over environmental topics (including genetic modification) and - using the author's first-hand research - demonstrates how sociologists can best pursue practical work on environmental topics.

Nature in Literary and Cultural Studies is a collection of essays written by European and North American scholars who argue that nature and culture can no longer be thought of in oppositional, mutually exclusive terms. They are united in an effort to push the theoretical limits of ecocriticism towards a more rigorous investigation of nature's critical potential as a concept that challenges modern culture's philosophical assumptions, epistemological convictions, aesthetic principles, and ethical imperatives. This volume offers scholars and students of literature, culture, history, philosophy, and linguistics new insights into the ongoing transformation of ecocriticism into an innovative force in international and interdisciplinary literary and cultural studies.

This book examines the challenges and possibilities of conducting cultural environmental history research today. Disciplinary commitments certainly influence the questions scholars ask and the ways they seek out answers, but some methodological challenges go beyond the boundaries of any one discipline. The book examines: how to account for the fact that humans are not the only actors in history yet dominate archival records; how to attend to the non-visual senses when traditional sources offer only a two-dimensional, non-sensory version of the past; how to decolonize research in and beyond the archives; and how effectively to use sources and means of communication made available in the digital age. This book will be a valuable resource for those interested in environmental history and politics, sustainable development and historical geography.

In Ecocritical Explorations, Patrick D. Murphy explores environmental literature and environmental cultural issues through both theoretical and applied criticism. He engages with the

Bookmark File PDF Cultural Studies And Environmentalism The Confluence Of Ecojustice Place Based Science Education And Indigenous Knowledge Systems 3 Cultural Studies Of Science Education

concepts of referentiality, simplicity, the nation state, and virtual reality in the first section of the book, and then goes on to interrogate these issues in contemporary environmental literature, both American and international. He concludes his argument with a discussion of the larger frames of family dynamics and un-natural disasters, such as hurricanes and global warming, ending with a chapter on the integration of scholarship and pedagogy in the classroom, with reference to his own teaching experiences. Murphy's study provides a wide ranging discussion of contemporary literature and cultural phenomena through the lens of ecological literary criticism, giving attention to both theoretical issues and applied critiques. In particular, he looks at popular literary genres, such as mystery and science fiction, as well as actual disasters and disaster scenarios. *Ecocritical Explorations in Literary and Cultural Studies* is a timely contribution to ecological literary criticism and an insightful look into how we represent our relationship with the environment.

Nature Across Cultures: Views of Nature and the Environment in Non-Western Cultures consists of about 25 essays dealing with the environmental knowledge and beliefs of cultures outside of the United States and Europe. In addition to articles surveying Islamic, Chinese, Native American, Aboriginal Australian, Indian, Thai, and Andean views of nature and the environment, among others, the book includes essays on Environmentalism and Images of the Other, Traditional Ecological Knowledge, Worldviews and Ecology, Rethinking the Western/non-Western Divide, and Landscape, Nature, and Culture. The essays address the connections between nature and culture and relate the environmental practices to the cultures which produced them. Each essay contains an extensive bibliography. Because the geographic range is global, the book fills a gap in both environmental history and in cultural studies. It should find a place on the bookshelves of advanced undergraduate students, graduate students, and scholars, as well as in libraries serving those groups.

Green Cultural Studies - a work of textual analysis and polemical theory - will upset and delight a variety of readers. Film critics will be challenged by Hochman's illuminating readings of film. Marxists will find splendid capitalist critiques. Comparatists, myth critics, ecocritics, and intellectuals will find engaging observations, as will literary critics, deconstructionists, philosophers of technology and science, cultural critics, and environmental activists. *Green Cultural Studies* is a valuable reference book to anyone teaching, writing, or thinking about the intricate issues of nature and culture.
