One of the great unsung Negroes of American history is Dr. Daniel Hale Williams. Why have so few people heard of him? In 1893 Dr. Williams performed the world's first successful heart operation. Why is this not a well-known fact? These are the facts and questions that stimulated Helen Buckler to spend 10 years in 14 States, with hundreds of people and government archives, documents, and records in order to unearth the life story of America's first Negro surgeon and the facts and circumstances of his history-making achievement. The search led from question to question. Where did he acquire the knowledge and skill for this operation only 30 years after emancipation? What happened to him after he achieved this medical breakthrough? What did he do to help the cause of his own race? Why did some Negroes worship him and some hate and fear him? Why was he called "disloyal" and was he really? Since he looked white, why didn't he "go white"? From the answers emerge not only the fascinating portrait of a complex and gifted man, but a revealing picture of Negro life and history from 1856-1931. Daniel Hale Williams is a glowing tribute to a great man which reads the power and drama of fiction.

The secret history of our most vital organ--the human heart The Man Who Touched His Own Heart tells the raucous, gory, mesmerizing story of the heart, from the first "explorers" who dug up cadavers and plumbed their hearts' chambers, through the first heart surgeries-which had to be completed in three minutes before death arrived-to heart transplants and the latest medical efforts to prolong our hearts' lives, almost defying nature in the process. Thought of as the seat of our soul, then as a mysteriously animated object, the heart is still more a mystery than it is understood. Why do most animals only get one billion beats? (And how did modern humans get to over two billion-effectively letting us live out two lives?) Why are sufferers of gingivitis more likely to have heart attacks? Why do we often undergo expensive procedures when cheaper ones are just as effective? What do Da Vinci, Mary

The bestselling author of *Intern and Doctored* tells the story of the thing that makes us tick For centuries, the human heart seemed beyond our understanding: an inscrutable shuddering mass that was somehow the driver of emotion and the seat of the soul. As the cardiologist and bestselling author Sandeep Jauhar shows in *Heart: A History*, it was only recently that we demolished age-old taboos and devised the transformative procedures that have changed the way we live. Deftly alternating between key historical episodes and his own

Access Free Daniel Hale Williams Surgeon Who Opened Hearts And Minds Getting To

work, Jauhar tells the colorful and little-known story of the doctors who risked their careers and the patients who risked their lives to know and heal our most vital organ. He introduces us to Daniel Hale Williams, the African American doctor who performed the world's first open heart surgery in Gilded Age Chicago. We meet C. Walton Lillehei, who connected a patient's circulatory system to a healthy donor's, paving the way for the heart-lung machine. And we encounter Wilson Greatbatch, who saved millions by inventing the pacemaker—by accident. Jauhar deftly braids these tales of discovery, hubris, and sorrow with moving accounts of his family's history of heart ailments and the patients he's treated over many years. He also confronts the limits of medical technology, arguing that future progress will depend more on how we choose to live than on the devices we invent. Affecting, engaging, and beautifully written, *Heart: A History* takes the full measure of the only organ that can move itself.
