Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded systems
- Feed exploits through infotainment and vehicle-to-vehicle communication systems
- Override factory settings with performance-tuning techniques
- Build physical and virtual test benches to try out exploits safely

If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

This is the fourth volume in an operational and chronological series covering the U.S. Marine Corps’ participation in the Vietnam War. This volume details the change in focus of the III Marine Amphibious Force (III MAF), which fought in South Vietnam’s northernmost corps area, I Corps. This volume, like its predecessors, concentrates on the ground war in I Corps and III MAF’s perspective of the Vietnam War as an entity. It also covers the Marine Corps participation in the advisory effort, the operations of the two Special Landing Forces of the U.S. Navy’s Seventh Fleet, and the services of Marines with the staff of the U.S. Military Assistance Command, Vietnam. There are additional chapters on supporting arms and logistics, and a discussion of the Marine role in Vietnam in relation to the overall American effort.

Charles Perrow is famous worldwide for his ideas about normal accidents, the notion that multiple and unexpected failures--catastrophes waiting to happen--are built into our society's complex systems. In *The Next Catastrophe*, he offers crucial insights into how to make us safer, proposing a bold new way of thinking about disaster preparedness. Perrow argues that rather than laying exclusive emphasis on protecting targets, we should reduce their size to minimize damage and diminish their attractiveness to terrorists. He focuses on three causes of disaster--natural, organizational, and deliberate--and shows that our best hope lies in the deconcentration of high-risk populations, corporate power, and critical infrastructures such as electric energy, computer systems, and the chemical and food industries. Perrow reveals how the threat of catastrophe is on the rise, whether from terrorism, natural disasters, or industrial accidents. Along the way, he gives us the first comprehensive history of FEMA and the Department of Homeland Security and examines why these agencies are so ill equipped to protect us. *The Next Catastrophe* is a penetrating reassessment of

the very real dangers we face today and what we must do to confront them. Written in a highly accessible style by a renowned systems-behavior expert, this book is essential reading for the twenty-first century. The events of September 11 and Hurricane Katrina--and the devastating human toll they wrought--were only the beginning. When the next big disaster comes, will we be ready? In a new preface to the paperback edition, Perrow examines the recent (and ongoing) catastrophes of the financial crisis, the BP oil spill, and global warming.

This book provides analyses and evaluations of the Health Profession Opportunity Grants (HPOG) program, a federal government demonstration project that is targeted at providing career opportunities in the health care field for individuals in low-wage populations.

In the spring of 1997, while assigned to Headquarters Air Force Special Operations Command, an idea materialized that would ultimately dominate my life for the next three years. As I reflected over 19 years in special operations, I realized just how little I actually knew about the Combat Talon aircraft in which I had spent most of my active duty career. I could cite line and page number from complex technical orders, and I had been qualified as a flight examiner and instructor pilot, but I did not have a clue about the origins of Combat Talon, what operations the aircraft were involved in, or the people who flew and maintained them. Life in a special

operations squadron was secretive, where only those with an official "need to know" were read into limited access programs. With the com - partmentalization of information within the squadron, personnel working side by side were often not aware of what other members of the unit were doing. I was convinced that it was the right time to document the untold story of the Combat Talon. The commander of Air Force Special Operations Command was Maj Gen Jim Hobson at the time. As a young lieutenant, he had been assigned to the 15th SOS at Nha Trang Air Base, Vietnam. I felt that if the project were explained to General Hobson, I stood a good chance of getting his approval. In March of 1997 I prepared a staff summary package outlining the Combat Talon Project and forwarded it to Herb Mason, the Headquarters AFSOC command historian. I provided four reasons the Combat Talon Project should be approved. First, I noted that much of the documented history of the weapons system was fragmented and could only be found in the files of private contractors, including Lockheed Air Service (LAS) Ontario and the Robert Fulton Company. LAS Ontario was no longer involved in the Combat Talon program and was scheduled to cease operation in the spring of 1998. The remaining LAS Ontario projects were scheduled to move to Palmdale, California, and join the highly classified Skunk Works program. The company did not plan to move most of its Combat Talon files, preferring to destroy them in place rather than store them at its new location. With the pending decision to terminate the Fulton recovery system for the Combat Talon I, the Robert Fulton Company no longer would provide equipment to the Air Force. Fulton was 88

years young, and his keen mind held a vast treasure of information about early development of the system. His comprehensive files also contained documentation on the Fulton system that was not available anywhere else. These key resources would not be available to future historians. The second factor that I cited centered around recent Air Force reorganizations. Many commands either were combined or redesignated (e.g., Air Force Logistics Command [AFLC] had become the Air Force Materiel Command [AFMC], and whole divisions had been eliminated in the process). At Wright-Patterson AFB, Ohio, the home of AFMC, the old Air Force Logistics Command Directorate, which managed the Combat Talon program for the Air Force, had disbanded. Most of its records either had been destroyed or placed in long-term storage. The Air Force reorganization was across the board, and a tremendous amount of classified files was being eliminated. Prompt approval of the project would allow access to some of the remaining files, and copies could be made for future research.
