Final Exam Practice Problems Note: In this file are some additional practice problems for our final exam, mostly pertaining to logistic regression. I do not claim that they cover all the possible topics that are fair game for the exam. They are simply intended to supplement the various problems on the homework assignments, handouts and previous

## Final Exam Practice Problems Logistic Regression Practice

Total SSQ = (Regression SSQ) + (Regression SSQ) is constant. Therefore total SSQ can be calculated from just one anova table: Total (SSQ) = 1,546 + 12,246 = 13,792  
 $(1546)/(13,792) = 0.1121$   
 $R(X \text{ only}) = (160)/(13,792) = 0.0116$   
 $R(X \text{ and } X) = 2784/(13,792) = 0.2019$
