Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. *Strategies to Improve Cardiac Arrest Survival* examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of *Strategies to Improve Cardiac Arrest Survival* provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

This new edition of *Cardiovascular Disease in Companion Animals*, authored by two leading experts in the field, now covers the horse as well as the dog and cat. The comprehensive, superbly illustrated book has been completely revised and expanded from the original *Cardiovascular Disease in Small Animal Medicine*. Five key sections provide clearly written overviews of normal cardiovascular structure and function, pathophysiologic derangements and their manifestations, clinical cardiology testing and interpretation, and extensive guidance for cardiovascular disease diagnosis and management. A broad collection of clinical images, graphics, tables, diagrams, and a Summary Drug Tables for each species enhances the book's utility as a practical clinical resource. Up-to-date references support the focus on cardiovascular diseases and reflect important developments in veterinary cardiology and practice. A valuable companion website contains videos and additional images to enhance each chapter. Since first publication in 2007, Dr Ware's authoritative yet user-friendly guide to cardiovascular diseases in veterinary practice has been widely praised. This book contains even more illustrations of the highest quality. Coverage also includes diagnostic considerations for various clinical problems, procedures and techniques for patient evaluation, and detailed management strategies for congestive heart failure, arrhythmias, and other complications of cardiovascular disease. This second edition is a must-have for veterinary practitioners, students, interns, residents, and others with an in-depth interest in veterinary cardiology.

Markets and Development presents a series of critical contributions focused on the political relationship between citizens, civil society, and neoliberal development policy 's latest form. The dramatic increase of ' access to finance ' investments, newly gender-sensitive approaches to building neoliberal labour markets, the universal promotion of public-private partnerships, and the ' development financing ' of extractive industries, have all seen citizens, social movements, and NGOs variously engaged in, and against, neoliberalism like never before. The precise form that this engagement takes is conditioned by both the perceived and real opportunities, and the risks, of an agenda which seeks to intern ' emerging ' and ' frontier markets ' deep within a concretising world market, with transformative repercussions for both those involved and, notably, for state-society relations. The contributors to this volume focus on essential aspects of the contemporary neoliberal development agenda and its relationship to and with citizens and civil society, tackling questions related to the roles that various actors within civil society in the underdeveloped world are playing under late capitalism, and how these roles relate to current efforts to establish and extend markets, and market society more broadly, in a neoliberal image. This book was originally published as a special issue of Globalizations.

Covering essential principles of anesthesia administration and pain management in small and large animals, Anesthesia and Analgesia for Veterinary Technicians, 5th Edition is completely updated with the latest drugs and techniques.
