BricxCC on standard firmware LEGO Mindstorms. This can be very convenient for those, who want to program both in NXC and NXT-G, because it is not necessary to upload a new firmware every time you need to change the programming language.

Programming LEGO NXT Robots using NXC

NXC is a programming language, invented by John Hansen, which was especially designed for the Lego robots. If you have never written a program before, don't worry. NXC is really easy to use and this tutorial will lead you on your first steps towards it. To make writing programs even easier, there is the Bricx Command Center (BricxCC).

LEGO NXT Robots using NXC – Part 2 Adding comments To make your program even more readable, it is good to add some comment to it. Whenever you put // on a line, the rest of that line is ignored and can be used for comments. A long comment can be put between /* and */. Comments are syntax highlighted in the BricxCC. The full program could look as follows:

Using Python to Program LEGO MINDSTORMS® Robots: The PyNXC ...

Welcome to NQC. Not Quite C is a simple language with a C-like syntax that can be used to program Lego's RCX programmable brick (from the Mindstorms set). If you are just getting started with programming, then graphical environments such as the Mindstorms RIS software or Robolab are probably better choices. If, however, you're a C programmer and prefer typing a few lines to drag and drop icon programming, then NQC may be perfect for you.

NQC - Not Quite C

LEGO Mindstorms NXT is a programmable robotics kit released by Lego in late July 2006. It replaced the first-generation Lego Mindstorms kit, which was called the Robotics Invention System. The base kit ships in two versions: the Retail Version and the Education Base Set. It comes with the NXT-G programming software, or optionally LabVIEW for Lego Mindstorms. A variety of unofficial languages exist, such as NXC, NBC, leJOS NXJ, and RobotC. The second generation of the set, the Lego Mindstorms NXT
