Quality work that fosters job satisfaction and health enjoys top priority in industry all over the world. This was not always so. Until recently analysis of job attitudes focused primarily on human relations problems within organizations. While American industry was trying to solve the unsolvable problem of avoiding interpersonal dissatisfaction, problems with the potential for solution, such as training and quality production, were ignored. When first published, 'The Motivation to Work' challenged the received wisdom by showing that worker fulfillment came from achievement and growth within the job itself. In his new introduction, Herzberg examines thirty years of motivational research in job-related areas. Based on workers' accounts of real events that have made them feel good or bad on the job, the findings of Herzberg and his colleagues have stimulated research and controversy that continue to the present day. The authors surprisingly found that while a poor work environment generated discontent, improved conditions seldom brought about improved attitudes. Instead, satisfaction came most often from factors intrinsic to work: achievements, job recognition, and work that was challenging, interesting, and responsible. The evidence marshaled by this volume called into question many previous assumptions about job satisfaction and worker motivation. Feelings about intrinsic and extrinsic factors could not be validly averaged on a single scale of measurement. Motivation and performance are not merely dependent upon environmental needs and external rewards. Frederick Herzberg and his staff based their motivation-hygiene theory on a variety of human needs and applied it to a strategy of job enrichment that has widely influenced motivation and job design strategies. 'Motivation to Work' is a landmark volume that is of enduring interest to sociologists, psychologists, labor studies specialists, and organization analysts.

This breakthrough book provides a comprehensive discussion of intrinsic motivation in the workplace--the psychological rewards workers get directly from the work itself.

A unique compendium of international investigations into motivation and performance, this book offers chapters by industrial and organizational psychologists from the United States, Europe, Australia, and Japan as they share their theories, concepts, empirical evidence, and practical evidence regarding the subject. The volume focuses on three distinct themes: \* the relationship between motivation and performance \* practical examples of building and strengthening the motivating potential with particular attention paid to productivity and the health of the employees \* the development of work motivation over time and the change of the relative importance of central variables Work Motivation provides an exceptional blend of modern theoretical approaches, technologically sound techniques for solving practical problems, and empirical results to prove theoretical and technical validities.

This book provides a unique behavioral science framework for motivating employees in organizational settings. Drawing upon his experiences as a staff psychologist and consultant, Gary Latham writes in a “mentor voice” that is highly personal and rich in examples. The book includes anecdotes about the major thought leaders in the field of motivation, together with behind-the-scenes accounts of research and the researchers. It offers a chronological review of the field, and a taxonomy for the study and practice of motivation. Controversies of theoretical and practical significance such as the importance of money, the relationship between job satisfaction and job performance, and the distinction between intrinsic and extrinsic motivation are discussed.

A top leadership consultant says: Stop trying to motivate people! Find a powerful alternative to the carrot and stick in this science-driven guide. It's frustrating for everyone involved and it just doesn’t work. You can’t motivate people—they are already motivated, but generally in superficial and short-term ways.

In this book, Susan Fowler builds upon the latest scientific research on the nature of human motivation to lay out a tested model and course of action that will help leaders guide their people toward the kind of motivation that not only increases productivity and engagement but that gives them a profound sense of purpose and fulfillment. Fowler argues that leaders still depend on traditional carrot-and-stick techniques because they haven't understood their alternatives and don't know what skills are necessary to apply the new science of motivation. Her Optimal Motivation process shows leaders how to move people away from dependence on external rewards and help them discover how their jobs can meet the deeper psychological needs—for autonomy, relatedness, and competence—that science tells us result in meaningful and sustainable motivation. Optimal Motivation has been proven in organizations all over the world—Fowler's clients include Microsoft, CVS, NASA, the Catholic Leadership Institute, H&R Block, Mattel, and dozens more. Throughout this book, she illustrates how each step of the process works using real-life examples—and offers a groundbreaking answer for leaders who want to get motivation right!

The last century has seen a wide variety of approaches to motivation, from scientific management through financial incentives, productivity bargaining to job enrichment. Psychologists and other social scientists have attempted to help industry through the development of theories on motivation and management style. This book, first published in 1976, reviews these efforts and attempts to evaluate their effectiveness. This title will be of interest to students of business studies and human resource management.
